ORDERING REPLACEMENT PARTS

To order replacement parts, contact the ICON Health & Fitness, Ltd. office, or write:

ICON Health & Fitness, Ltd.
Unit 4
Revie Road Industrial Estate
Revie Road, Beeston
Leeds, LS11 8JG
UK

Tel: 08457 089 009
Fax: 0 (044) 113 387 7125

When ordering parts, please be prepared to give the following information:

• the MODEL NUMBER of the product (NETL11520)
• the NAME of the product (NordicTrack® 2500 R treadmill)
• the SERIAL NUMBER of the product (see the front cover of this manual)
• the KEY NUMBER and DESCRIPTION of the part(s) (see the PART LIST on pages 30 and 31 and the EXPLODED DRAWING attached in the centre of this manual)

QUESTIONS?

As a manufacturer, we are committed to providing complete customer satisfaction. If you have questions, or if there are missing parts, please call:

08457 089 009

Or write:
ICON Health & Fitness, Ltd.

ORDERING REPLACEMENT PARTS .............................................. Back Cover

Note: An EXPLODED DRAWING is attached in the centre of this manual.
1. It is the responsibility of the owner to ensure that all users of this treadmill are adequately informed of all warnings and precautions.

2. Use the treadmill only as described in this manual.

3. Place the treadmill on a level surface, with at least 2.5 m (8 ft.) of clearance behind it and 0.5 m (2 ft.) on each side. Do not place the treadmill on a surface that blocks any air openings. To protect the floor or carpet from damage, place a mat under the treadmill.

4. Keep the treadmill indoors, away from moisture and dust. Do not put the treadmill in a garage or covered patio, or near water.

5. Do not operate the treadmill where aerosol products are used or where oxygen is being administered.

6. Keep children under the age of 12 and pets away from the treadmill at all times.

7. The treadmill should not be used by persons weighing more than 115 kg (250 lbs.).

8. Never allow more than one person on the treadmill at a time.

9. Wear appropriate exercise clothes when using the treadmill. Do not wear loose clothing that could become caught in the treadmill. Athletic support clothes are designed specifically for men and women. Always wear athletic shoes. Never use the treadmill with bare feet, wearing only stockings, or in sandals.

10. When connecting the power cord (see page 9), plug the power cord into an earthed circuit. No other appliance should be on the same circuit. When replacing the fuse, an ASTA approved BS1362 type should be fitted to the fuse carrier. A 13 amp fuse should be used.

11. If an extension cord is needed, use only a 3-conductor, 1 mm² (14-gauge) cord that is no longer than 1.5 m (5 ft.).

12. Keep the power cord and the surge suppressor away from heated surfaces.

13. Never move the walking belt whilst the power is turned off. Do not operate the treadmill if the power cord or plug is damaged, or if the treadmill is not working properly. (See BEFORE YOU BEGIN on page 5 if the treadmill is not working properly.)

14. Never start the treadmill whilst you are standing on the walking belt. Always hold the handrails whilst using the treadmill.

15. The treadmill is capable of high speeds. Adjust the speed in small increments to avoid sudden jumps in speed.

16. Using hand weights and not holding the handrails may compromise your ability to maintain your balance. Hand weights should be used only by experienced users.

17. The pulse sensors are not medical devices. Various factors, including the user’s movement, may affect the accuracy of heart rate readings. The pulse sensors are intended only as exercise aids in determining heart rate trends in general.

18. Never leave the treadmill unattended whilst it is running. Always remove the key, unplug the power cord, and move the on/off switch to the off position when the treadmill is not in use. (See the drawing on page 5 for the location of the on/off switch.)

19. Do not change the incline of the treadmill by placing objects under the treadmill.

20. Do not attempt to raise, lower, or move the treadmill until it is properly assembled. (See ASSEMBLY on page 6, and HOW TO FOLD AND MOVE THE TREADMILL on page 23.) You must be able to safely lift 20 kg (45 lbs.) in order to raise, lower, or move the treadmill.

21. When folding or moving the treadmill, make sure that the storage latch is fully closed.
22. When using iFIT.com CD’s and videos, an electronic “chirping” sound will alert you when the speed and/or incline of the treadmill is about to change. Always listen for the “chirp” and be prepared for speed and/or incline changes. In some instances, the speed and/or incline may change before the personal trainer describes the change.

23. When using iFIT.com CD’s and videos, you can manually override the speed and incline settings at any time by pressing the speed and incline buttons. However, when the next “chirp” is heard, the speed and/or incline will change to the next settings of the CD or video program.

24. Always remove iFIT.com CD’s and videos from your CD player or VCR when you are not using them.

25. Inspect and properly tighten all parts of the treadmill regularly.

26. Never insert or drop any object into any opening.

27. **DANGER:** Always unplug the power cord immediately after use, before cleaning the treadmill, and before performing the maintenance and adjustment procedures described in this manual. Never remove the motor hood unless instructed to do so by an authorized service representative. Servicing other than the procedures in this manual should be performed by an authorized service representative only.

28. This treadmill is intended for in-home use only. Do not use this treadmill in any commercial, rental, or institutional setting.

**WARNING:** Before beginning this or any exercise program, consult your physician. This is especially important for persons over the age of 35 or persons with pre-existing health problems. Read all instructions before using. ICON assumes no responsibility for personal injury or property damage sustained by or through the use of this product.

SAVE THESE INSTRUCTIONS

---

**SUGGESTED STRETCHES**

The correct form for several basic stretches is shown at the right. Move slowly as you stretch—never bounce.

1. **Toe Touch Stretch**

   Stand with your knees bent slightly and slowly bend forward from your hips. Allow your back and shoulders to relax as you reach down toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Hamstrings, back of knees and back.

2. **Hamstring Stretch**

   Sit with one leg extended. Bring the sole of the opposite foot toward you and rest it against the inner thigh of your extended leg. Reach toward your toes as far as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Hamstrings, lower back and groin.

3. **Calf/Achilles Stretch**

   With one leg in front of the other, reach forward and place your hands against a wall. Keep your back leg straight and your back foot flat on the floor. Bend your front leg, lean forward and move your hips toward the wall. Hold for 15 counts, then relax. Repeat 3 times for each leg. To cause further stretching of the achilles tendons, bend your back leg as well. Stretches: Calves, achilles tendons and ankles.

4. **Quadriceps Stretch**

   With one hand against a wall for balance, reach back and grasp one foot with your other hand. Bring your heel as close to your buttocks as possible. Hold for 15 counts, then relax. Repeat 3 times for each leg. Stretches: Quadriceps and hip muscles.

5. **Inner Thigh Stretch**

   Sit with the soles of your feet together and your knees outward. Pull your feet toward your groin area as far as possible. Hold for 15 counts, then relax. Repeat 3 times. Stretches: Quadriceps and hip muscles.

---

Note: The decal shown at the right is 49% of actual size.
CONGRATULATIONS for selecting the new NordicTrack® 2500 R treadmill. The 2500 R treadmill combines advanced technology with innovative design to help you get the most from your workouts in the convenience of your home. And when you’re not exercising, the unique 2500 R can be folded up, requiring less than half the floor space of other treadmills.

For your benefit, read this manual carefully before using the treadmill. If you have questions after reading the manual, please call our Customer Service Department at 08457 089 009. To help us assist you, please note the product model number and serial number before calling. The model number is NETL11520. The serial number can be found on a decal attached to the treadmill (see the front cover of this manual for the location).

Before reading further, please familiarise yourself with the parts that are labelled in the drawing below.

A WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for individuals over the age of 35 or individuals with pre-existing health problems.

The pulse sensors are not medical devices. Various factors, including the user’s movement, may affect the accuracy of heart rate readings. The pulse sensors are intended only as exercise aids in determining heart rate trends in general.

The following guidelines will help you to plan your exercise program. For more detailed exercise information, obtain a reputable book or consult your physician.

EXERCISE INTENSITY

Whether your goal is to burn fat or to strengthen your cardiovascular system, the key to achieving the desired results is to exercise with the proper intensity. The proper intensity level can be found by using your heart rate as a guide. The chart below shows recommended heart rates for fat burning and aerobic exercise.

<table>
<thead>
<tr>
<th>HEART RATE TRAINING ZONES</th>
<th>FAT BURN</th>
<th>FAT BURN</th>
<th>FAT BURN</th>
<th>FAT BURN</th>
<th>FAT BURN</th>
</tr>
</thead>
<tbody>
<tr>
<td>HEART RATES</td>
<td>25</td>
<td>35</td>
<td>40</td>
<td>45</td>
<td>50</td>
</tr>
<tr>
<td>Training Zones</td>
<td>30</td>
<td>40</td>
<td>45</td>
<td>50</td>
<td>55</td>
</tr>
<tr>
<td>Max Fat Burn</td>
<td>125</td>
<td>135</td>
<td>145</td>
<td>155</td>
<td>165</td>
</tr>
<tr>
<td>Age</td>
<td>25</td>
<td>30</td>
<td>40</td>
<td>50</td>
<td>55</td>
</tr>
</tbody>
</table>

To find the proper heart rate for you, first find your age near the bottom of the chart (ages are rounded off to the nearest ten years). Next, find the three numbers above your age. The three numbers define your “training zone.” The lower two numbers are recommended heart rates for fat burning; the higher number is the recommended heart rate for aerobic exercise.

To measure your heart rate during exercise, use the handgrip pulse sensor or the chest pulse sensor.

Fat Burning

To burn fat effectively, you must exercise at a relatively low intensity level for a sustained period of time. During the first few minutes of exercise, your body uses easily accessible carbohydrate calories for energy. Only after the first few minutes does your body begin to use stored fat calories for energy. If your goal is to burn fat, adjust the speed and incline of the treadmill until your heart rate is near the lowest number in your training zone.

For maximum fat burning, adjust the speed and incline of the treadmill until your heart rate is near the middle number in your training zone.

Aerobic Exercise

If your goal is to strengthen your cardiovascular system, your exercise must be “aerobic.” Aerobic exercise is activity that requires large amounts of oxygen for prolonged periods of time. This increases the demand on the heart to pump blood to the muscles, and on the lungs to oxygenate the blood. For aerobic exercise, adjust the speed and incline of the treadmill until your heart rate is near the highest number in your training zone.

WORKOUT GUIDELINES

Each workout should include the following three parts:

A Warm-up—Start each workout with 5 to 10 minutes of stretching and light exercise. A proper warm-up increases your body temperature, heart rate and circulation in preparation for exercise.

Training Zone Exercise—After warming up, increase the intensity of your exercise until your pulse is in your training zone for 20 to 60 minutes. (During the first few weeks of your exercise program, do not keep your pulse in your training zone for longer than 20 minutes.) Breathe regularly and deeply as you exercise—never hold your breath.

A Cool-down—Finish each workout with 5 to 10 minutes of stretching to cool down. This will increase the flexibility of your muscles and will help prevent post-exercise problems.

EXERCISE FREQUENCY

To maintain or improve your condition, complete three workouts each week, with at least one day of rest between workouts. After a few months, you may complete up to five workouts each week if desired. The key to success is to make exercise a regular and enjoyable part of your everyday life.

WARNING: Before beginning this or any exercise program, consult your physician. This is especially important for individuals over the age of 35 or individuals with pre-existing health problems.

The pulse sensors are not medical devices. Various factors, including the user’s movement, may affect the accuracy of heart rate readings. The pulse sensors are intended only as exercise aids in determining heart rate trends in general.
ASSEMBLY

Assembly requires two people. Set the treadmill in a cleared area and remove all packing materials. Do not dispose of the packing materials until assembly is completed. Assembly requires the included allen wrench and your own Phillips screwdriver, adjustable wrench, and wire cutters.

Note: The underside of the treadmill walking belt is coated with high-performance lubricant. During shipping, a small amount of lubricant may be transferred to the top of the treadmill or the shipping carton. This is a normal condition and does not affect treadmill performance. If there is lubricant on top of the walking belt or foot pads, simply wipe off the lubricant with a soft cloth and a mild, non-abrasive cleaner.

WARNING: Do not plug in the power cord until the treadmill is completely assembled.

1. With the help of a second person, carefully raise the Uprights (110) to the position shown.

See the inset drawing. Insert one of the Extension Legs (88) into the treadmill as shown. Make sure that the Thick Base Pad (90) is on the bottom. (Note: It may be helpful to tip the Uprights (110) forward as you insert the Extension Leg.) Insert the other Extension Leg (not shown) in the same way.

2. With the help of a second person, carefully tip the Uprights (110) down as shown. Make sure that the Extension Legs (88) remain in the Uprights.

Attach each Extension Leg (88) with two Base Screws (86) and a Base Pad (75) as shown.

With the help of a second person, carefully tip the Uprights (110) back to the vertical position.

Note: One replacement Thick Base Pad (90) may be included.

3. See drawing 3a. Whilst another person holds the Handrails (89), thread Handrail Bolts (111) two to three turns into the two holes in each Handrail. Then, remove the Handrail Bolts.

See drawing 3b. Pinch the tabs on the Grounding Bracket (115) so that the tabs will fit into the indicated hole in the left Upright (110). Then, insert the Grounding Bracket into the hole as far as possible.

Note: It may be helpful to set the Handrails (89) on the Uprights (110) and loosely thread a Handrail Bolt (111) into the left Upright and the left Handrail. Tip the Handrails, if necessary, to thread in the Handrail Bolt. Have another person support the Handrails as you complete the remaining steps.

PROBLEM: The chest pulse sensor does not function properly

SOLUTION:

a. If the chest pulse sensor does not function properly, refer to CHEST PULSE SENSOR TROUBLE-SHOOTING on page 7.

b. If the chest pulse sensor still does not function properly, the battery should be changed. To replace the battery, locate the battery cover on the back of the sensor unit. Insert a coin into the slot in the cover, and turn the cover counterclockwise to the "open" position. Remove the cover.

Next, remove the old battery from the sensor unit. Insert a new CR 2032 battery, making sure that the writing is on top. Make sure that the rubber gasket is in place in the sensor unit. Reattach the battery cover and turn it to the closed position.
PROBLEM: The walking belt slows when walked on

SOLUTION: a. If an extension cord is needed, use only a 3-conductor, 1mm² (14-gauge) cord that is no longer than 1.5 m (5 ft.).

b. If the walking belt is overtightened, treadmill performance may decrease and the walking belt may become damaged. Remove the key and UNPLUG THE POWER CORD. Using the allen wrench, turn both rear roller adjustment bolts counterclockwise, 1/4 of a turn. When the walking belt is properly tightened, you should be able to lift each side of the walking belt 5 to 7 cm (3 to 4 in) off the walking platform. Be careful to keep the walking belt centred. Plug in the power cord, insert the key and run the treadmill for a few minutes. Repeat until the walking belt is properly tightened.

c. If the walking belt still slows when walked on, please call our Customer Service Department, toll-free.

PROBLEM: The walking belt is off-centre or slips when walked on

SOLUTION: a. If the walking belt is off-centre, first remove the key and UNPLUG THE POWER CORD. If the walking belt has shifted to the left, use the allen wrench to turn the left rear roller bolt clockwise 1/2 of a turn. If the walking belt has shifted to the right, turn the left rear roller bolt counterclockwise 1/2 of a turn. Be careful not to overtighten the walking belt. Plug in the power cord, insert the key, and run the treadmill for a few minutes. Repeat until the walking belt is centred.

b. If the walking belt slips when walked on, first remove the key and UNPLUG THE POWER CORD. Using the allen wrench, turn both rear roller bolts clockwise, 1/4 of a turn. When the walking belt is correctly tightened, you should be able to lift each side of the walking belt 5 to 7 cm (3 to 4 in) off the walking platform. Be careful to keep the walking belt centred. Plug in the power cord, insert the key and carefully walk on the treadmill for a few minutes. Repeat until the walking belt is properly tightened.

PROBLEM: The incline of the treadmill does not change correctly or does not change when iFIT.com CD’s and videos are played

SOLUTION: a. With the key in the console, press one of the Incline buttons. Whilst the incline is changing, remove the key. After a few seconds, re-insert the key. The treadmill will automatically rise to the maximum incline level and then return to the minimum level. This will recalibrate the incline system.

4. Pull the Upright Wire Harness (101) up through a Handrail Spacer (114). Place the Handrail Spacer on the right Upright (110) as shown, with the cutout turned toward the treadmill (see inset drawing A). Place the other Handrail Spacer on the left Upright, with the cutout turned toward the treadmill.

Connect the Upright Wire Harness (101) to the wires extending from the Console Base (76). Insert the connectors and the Upright Wire Harness into the hole in the Console Base (refer to inset drawing B). Set the Handrail (89) on the Handrail Spacers (114), being careful not to pinch the Upright Wire Harness (101).

5. Insert two Handrail Bolts (111) with Handrail Washers (112) and Handrail Bushings (113) into the right Upright (110) and the right Handrail Spacer (114). Turn the Handrail Bushings (113) slightly and align the Bolts with the holes in the Handrail. Loosely thread the Bolts into the Handrail. Do not tighten the Bolts yet.

See the inset drawing. Remove the Handrail Bolt (111) used in step 3. Reach inside the left Upright (110) and spread the tabs on the Grounding Bracket (115) to allow a Bolt to pass through the Grounding Bracket. Attach the left Handrail (89) as described above. Make sure that the Handrail Bushings (113) are turned properly and that the Bolt goes through the Grounding Bracket. Tighten all four Handrail Bolts. Press an Upright Endcap (116) into each Upright.

6. Make sure the Lock Knob Sleeve (106) is pressed into the left Upright (110).

Make sure that the Lock Pin Collar (105) and the Spring (104) are on the Lock Pin (102). Insert the Lock Pin into the Lock Knob Sleeve (106) and the left Upright (110). Next, press the Lock Knob Spacer (107) onto the left Upright. Tighten the Lock Knob (108) onto the Lock Pin.

7. Make sure that all parts are tightened before you use the treadmill. Keep the included allen wrench in a secure place. The allen wrench is used to adjust the walking belt (see page 26). To protect the floor or carpet from damage, place a mat under the treadmill.
HOW TO USE THE CHEST PULSE SENSOR

HOW TO PUT ON THE CHEST PULSE SENSOR

Before you use the chest pulse sensor, please read all instructions on this page.

The chest pulse sensor consists of two components: the chest strap and the sensor unit.

If the chest strap is not connected to the sensor unit, refer to drawing 2. Insert one of the tabs on the chest strap through one end of the sensor unit. Make sure to press the end of the sensor unit under the buckle on the chest strap—the tab should be almost flush with the sensor unit.

Next, wrap the chest pulse sensor around your chest and attach the other end of the chest strap to the sensor unit. Adjust the length of the chest strap if necessary. The chest pulse sensor should be under your clothes, tight against your skin, and as high under the pectoral muscles or breasts as is comfortable. Make sure that the logo on the sensor unit is facing forward and is right-side-up.

Pull the sensor unit away from your body a few inches and locate the two electrode areas on the inner side. The electrode areas are the areas covered by shallow ridges. Using saline solution such as saliva or contact lens solution, wet both electrode areas. Return the sensor unit to a position against your chest.

CHEST PULSE SENSOR TROUBLESHOOTING

The instructions on the following pages explain how the chest pulse sensor is used with the console. If the letters “PLS” appear in the Heart Rate/Calories display, or if the displayed heart rate is excessively high or low, try the steps below.

• Make sure that you are wearing the chest pulse sensor as described at the left. If the chest pulse sensor does not function when positioned as described, move it slightly lower or higher on your chest.

• Use saline solution such as saliva or contact lens solution to wet the two electrode areas on the sensor unit. If heart rate readings do not appear until you begin perspiring, re-wet the electrode areas.

• As you walk or run on the treadmill, position yourself near the centre of the walking belt. For the console to display heart rate readings, the user must be within arm’s length of the console.

CHEST PULSE SENSOR CARE AND MAINTENANCE

• Thoroughly dry the chest pulse sensor after each use. The chest pulse sensor is activated when the electrode areas are wetted and the heart rate monitor is put on; the chest pulse sensor shuts off when it is removed and the electrode areas are dried. If the chest pulse sensor is not dried after each use, it may remain activated longer than necessary, draining the battery prematurely.

• Store the chest pulse sensor in a warm, dry place. Do not store the chest pulse sensor in a plastic bag or other container that may trap moisture.

• Do not expose the chest pulse sensor to direct sunlight for extended periods of time.

• Do not expose the chest pulse sensor to temperatures above 50 °C (122 °F) or below -10 °C (14 °F).

• Do not excessively bend or stretch the sensor unit when using or storing the chest pulse sensor.

• Clean the sensor unit periodically using a damp cloth; never use alcohol, abrasives, or chemicals. The chest strap may be hand washed and air dried.

PROBLEM: The displays of the console do not function properly

SOLUTION: a. Remove the key from the console. Reinsert the key fully into the console.

b. Check the circuit breaker located on the treadmill frame near the power cord. If the switch protrudes as shown, the circuit breaker has tripped. To reset the circuit breaker, wait for five minutes and then press the switch back in.

c. Remove the key from the console. Reinsert the key fully into the console.

d. Make sure that the on/off switch is in the on position.

e. If the treadmill still will not run, please call our Customer Service Department.

PROBLEM: The power does not turn on

SOLUTION: a. Make sure that the power cord is plugged into a properly earthed outlet (see page 9). If an extension cord is needed, use only a 3-conductor, 1 mm² (14-gauge) cord that is no longer than 1.5 m (5 ft.).

b. After the power cord has been plugged in, make sure that the key is fully inserted into the console.

c. Check the circuit breaker located on the treadmill near the power cord. If the switch protrudes as shown, the circuit breaker has tripped. To reset the circuit breaker, wait for five minutes and then press the switch back in.

d. Check the on/off switch located on the treadmill near the power cord. The switch must be in the on position.

PROBLEM: The power turns off during use

SOLUTION: a. Check the circuit breaker located on the treadmill frame near the power cord (see c. above). If the circuit breaker has tripped, wait for five minutes and then press the switch back in.

b. Make sure that the power cord is plugged in. Unplug the power cord, wait for five minutes, and then plug the power cord back in.

c. Remove the key from the console. Reinsert the key fully into the console.

d. Make sure that the on/off switch is in the on position.

e. If the treadmill still will not run, please call our Customer Service Department.

HOW TO USE THE CHEST PULSE SENSOR
HOW TO LOWER THE TREADMILL FOR USE
1. Hold the upper end of the treadmill with your right hand as shown. Using your left hand, pull the lock knob to the left and hold it. Pivot the treadmill down until the frame is past the pin on the lock knob.

2. Hold the treadmill firmly with both hands, and lower the treadmill to the floor. CAUTION: To decrease the possibility of injury, bend your legs and keep your back straight.

OPERATION AND ADJUSTMENT

THE PERFORMANT LUBE™ WALKING BELT

Your treadmill features a walking belt coated with PERFORMANT LUBE™, a high-performance lubricant. IMPORTANT: Never apply silicone spray or other substances to the walking belt or the walking platform. Such substances will deteriorate the walking belt and cause excessive wear.

HOW TO PLUG IN THE POWER CORD

This product must be earthed. If it should malfunction or break down, earthing provides a path of least resistance for electric current to reduce the risk of electric shock. This product is equipped with a cord having an equipment-earthing conductor and an earthing plug.

Two power cords are included. Select the one that will fit your outlet. See drawing 1. Plug the indicated end of the power cord into the socket on the treadmill. Next, lift the tab on the ferrite box and clamp the ferrite box around the power cord. See drawing 2. Plug the power cord into an appropriate outlet that is properly installed and earthed in accordance with all local codes and ordinances. Important: The treadmill is not compatible with GFCI-equipped outlets.

If the power cord is damaged, it must be replaced with a manufacturer-recommended power cord.

⚠️ DANGER: Improper connection of the equipment-earthing conductor can result in an increased risk of electric shock. Check with a qualified electrician or serviceman if you are in doubt as to whether the product is properly earthed. Do not modify the plug provided with the product—if it will not fit the outlet, have a proper outlet installed by a qualified electrician.
HOW TO FOLD AND MOVE THE TREADMILL

HOW TO FOLD THE TREADMILL FOR STORAGE

Before folding the treadmill, adjust the incline to the lowest position. If this is not done, the treadmill may be permanently damaged. Remove the key and unplug the power cord. CAUTION: You must be able to safely lift 20 kg (45 lbs.) in order to raise, lower, or move the treadmill.

1. Hold the treadmill with your hands in the locations shown at the right. CAUTION: To decrease the possibility of injury, bend your legs and keep your back straight. As you raise the treadmill, make sure to lift with your legs rather than your back. Raise the treadmill about halfway to the vertical position.

2. Move your right hand to the position shown and hold the treadmill firmly. Using your left hand, pull the lock knob to the left and hold it. Raise the treadmill until the catch plate is past the pin on the lock knob. Slowly release the lock knob.

Make sure that the pin is securely holding the catch plate.

To protect the floor or carpet from damage, place a mat under the treadmill. Keep the treadmill out of direct sunlight. Do not leave the treadmill in the storage position in temperatures above 30° C (85° F).

HOW TO MOVE THE TREADMILL

Before moving the treadmill, convert the treadmill to the storage position as described above. Make sure that the pin on the lock knob is securely holding the catch plate.

1. Hold the handrails as shown and place one foot against a wheel. Never move the treadmill without tipping it back. To reduce the risk of injury, use extreme caution whilst moving the treadmill. Do not attempt to move the treadmill over an uneven surface.

2. Tilt the treadmill back until it rolls freely on the front wheels. Carefully move the treadmill to the desired location.

3. Place one foot on wheel, and carefully lower the treadmill until it is resting in the storage position.

FEATURES OF THE CONSOLE

The advanced console offers an impressive array of features to help you get the most from your exercise. When the manual mode of the console is selected, the speed and incline of the treadmill can be changed with a touch of a button. As you exercise, the console will provide continuous exercise feedback. You can even measure your heart rate using the handgrip pulse sensor or the chest pulse sensor.

Three preset workout programs are also offered. Each program automatically controls the speed and incline of the treadmill to give you an effective workout. These included hand weights let you add upper-body exercise to your workouts as well. You can even create your own custom workout programs and store them in memory for future use.

The console also features iFIT.com interactive technology. iFIT.com technology is like having a personal trainer right in your home. Using the included audio cable, you can connect the treadmill to your VCR and TV and play iFIT.com video programs (videocassettes are available separately). Video programs offer the same benefits as iFIT.com CD programs, but add the excitement of working out with a class and an instructor—the hottest new trend at health clubs.

With the treadmill connected to your computer, you can also go to our Web site at www.iFIT.com and access basic programs, audio programs, and video programs directly from the internet. See www.iFIT.com for details.

For information about iFIT.com CD’s or videocassettes, send an e-mail to workouts@iFIT.com.

To use the manual mode of the console, follow the steps beginning on page 12. To use a preset program, see page 13. To create and use a custom program, see pages 15 and 16. To use an iFIT.com CD or video program, see page 19. To use an iFIT.com program directly from our Web site, see page 21.
THE INFORMATION MODE/DEMO MODE

The console features an information mode that keeps track of the total number of hours that the treadmill has been operated and the total number of miles that the walking belt has moved. The information mode also allows you to switch the console from miles per hour to kilometres per hour. In addition, the information mode allows you to turn on and turn off the demo mode.

To select the information mode, hold down the Stop button whilst inserting the key into the console. When the information mode is selected, the following information will be shown:

The Time/Watts display will show the total number of hours that the treadmill has been used.

The Distance/Incline display will show the total number of miles that the walking belt has moved.

An E, for English miles, or an M, for metric kilometres, will appear in the Speed/Pace display. Press the Speed + button to change the unit of measurement.

The Heart Rate/Calories display should be blank. If a “d” appears in the display, the console is in the “demo” mode. This mode is intended to be used only when a treadmill is displayed in a store. When the console is in the demo mode, the power cord can be plugged in, the key can be removed from the console, and the displays and indicators on the console will automatically light in a preset sequence, although the buttons on the console will not operate. If a “d” appears in the Heart Rate/Calories display when the information mode is selected, press the Speed – button so the Heart display is blank.

To exit the information mode, remove the key from the console.

CAUTION: Before operating the console, read the following precautions.

• Do not stand on the walking belt when turning on the power.
• Always wear the clip (see the drawing below) whilst operating the treadmill.
• Adjust the speed in small increments to avoid sudden jumps in speed.
• The pulse sensor is not a medical device. Various factors, including the user’s movement, may affect the accuracy of heart rate readings. The pulse sensor is intended only as an exercise aid in determining heart rate trends in general.
• To reduce the possibility of electric shock, keep the console dry. Avoid spilling liquids on the console and place only a sealed water bottle in the water bottle holder.

GETTING STARTED

1. Attach the clip to the waistband of your clothes.

Stand on the foot pads of the treadmill. Find the clip attached to the key and slide the clip onto the waistband of your clothes. Next, insert the key into the console. Test the clip by carefully taking a few steps backward until the key is pulled from the console. If the key is not pulled from the console, adjust the position of the clip as needed. Then, remove the key from the console.

2. Plug in the power cord.

See HOW TO PLUG IN THE POWER CORD on page 9.

3. Move the on/off switch to the on position.

Locate the on/off switch on the treadmill near the power cord. Move the on/off switch to the on position.

4. Insert the key fully into the console.

Stand on the foot pads of the treadmill. Make sure that the clip is securely attached to the waistband of your clothes. Next, insert the key into the console. After a moment, various displays and indicators on the console will light.

5. Enter your weight.

Although you can use the console without entering your weight, the console will display your calorie expenditure more accurately if you enter your weight. To enter your weight, press either of the Weight (WT) buttons. The current weight setting will appear in the Speed/Pace display. Press the Weight buttons again to enter your weight. A few seconds after the buttons are pressed, the weight setting will disappear from the display. Your weight will then be saved in memory.

6. Enter your age, if necessary.

Although you can use the console without entering your age, some features on our Web site may require you to enter your age (see page 21). To enter your age, press either of the AGE buttons. The current age setting will appear in the Time/Watts display. Press the AGE buttons again to enter your age. A few seconds after the buttons are pressed, the age setting will disappear from the display. Your age will then be saved in memory.
HOW TO USE THE MANUAL MODE

1. Insert the key fully into the console.
   See GETTING STARTED on page 11.

2. Select the manual mode.
   When the key is inserted, the manual mode will be selected and the M indicator will light. If a program has been selected, press the Program button repeatedly to select the manual mode.

3. Press the Start button or the Speed + button to start the walking belt.
   A moment after the button is pressed, the walking belt will begin to move at 1 mph. Hold the handrails and begin walking. As you exercise, change the speed of the walking belt as desired by pressing the Speed + and – buttons. Each time a button is pressed, the speed setting will change by 0.1 mph; if a button is held down, the speed setting will change in increments of 0.5 mph. To change the speed setting quickly, press the Quick Speed buttons. Note: After the buttons are pressed, it may take a moment for the treadmill to reach the selected speed setting.

   To stop the walking belt, press the Stop button. The Time/Watts display will begin to flash. To restart the walking belt, press the Start button or the Speed + button.

   During the first few minutes that you use the treadmill, inspect the alignment of the walking belt, and align it if necessary (see page 26).

4. Change the incline of the treadmill as desired.
   To change the incline of the treadmill, press the Incline buttons. Each time a button is pressed, the incline will change by 0.5%. The incline range is 0% to 10%. Note: After the buttons are pressed, it may take a moment for the treadmill to reach the selected incline setting.

5. Follow your progress with the LED track and the displays.
   - The LED track—When the manual mode or the iFIT.com mode is selected, the display will show an LED track representing 1/4 mile. As you exercise, the indicators on the track will light in sequence until you have walked or run 1/4 mile. A new lap will then begin.
   - The Training Zone display—As you exercise, the Training Zone display will show the approximate intensity level of your exercise. For example, if three or four indicators in the display are lit, your intensity level is ideal for fat burning.
   - Time/Watts display—When the manual mode or the iFIT.com mode is selected, this display will show the elapsed time and your power output in watts. When a preset program or a custom program is selected, the display will show the time remaining in the program, the time remaining in the current segment of the program, and your power output in watts. The display will change from one number to the next every few seconds, as shown by the indicators around the display.
   - Distance/Incline display—This display shows the distance that you have walked and the incline level of the treadmill. The display will change from one number to the other every few seconds, as shown by the indicators around the display.
   - Heart Rate/Calories display—When you are not using either of the pulse sensors, this display will show the approximate number of calories you have burned. When you are using one of the pulse sensors, the display will also show your heart rate.

6. HOW TO USE PROGRAMS DIRECTLY FROM OUR WEB SITE
   Our Web site at www.iFIT.com allows you to access basic programs, audio programs, and video programs directly from the internet. See www.iFIT.com for details.

   To use programs from our Web site, the treadmill must be connected to your home computer. See HOW TO CONNECT YOUR COMPUTER on page 18. In addition, you must have an internet connection and an internet service provider. A list of specific system requirements will be found on our Web site.

   Follow the steps below to use a program from our Web site.

   1. Insert the key fully into the console.
      See GETTING STARTED on page 11.

   2. Select the iFIT.com mode.
      When the key is inserted, the manual mode will be selected and the M indicator will light. If a program has been selected, press the Program button repeatedly to select the program.

   3. Go to your computer and start an internet connection.

   4. Start your web browser, if necessary, and go to our Web site at www.iFIT.com.

   5. Follow the desired links on our Web site to select a program.

   6. Follow the on-line instructions to start the program.

   When you start the program, an on-screen countdown will begin.

7. Return to the treadmill and stand on the foot pads. Find the clip attached to the key and slide the clip onto the waistband of your clothes.

   When the on-screen countdown ends, the program will begin and the walking belt will begin to move. Hold the handrails, step onto the walking belt, and begin walking. During the program, an electronic “chirping” sound will alert you when the speed and/or incline of the treadmill is about to change. CAUTION: Always listen for the “chirp” and be prepared for speed and/or incline changes.

   If the speed or incline settings are too high or too low, you can manually override the settings at any time by pressing the Speed or Incline buttons on the console. However, when the next “chirp” is heard, the speed and/or incline will change to the next settings of the program.

   To stop the walking belt at any time, press the Stop button on the console. The Time/Watts display will begin to flash. To restart the program, press the Start button or the Speed + button. After a moment, the walking belt will begin to move at 1.0 mph. When the next “chirp” is heard, the speed and incline will change to the next settings of the program.

   When the program is completed, the walking belt will stop and the Time/Watts display will begin to flash. Note: To use another program, press the Stop button and go to step 5.

   Note: If the speed or incline of the treadmill does not change when a “chirp” is heard, make sure that the iFIT.com indicator is lit and that the Time/Watts display is not flashing. In addition, make sure that the audio cable is properly connected, that it is fully plugged in, and that it is not wrapped around a power cord.

8. Follow your progress with the LED track and the displays.
   See step 5 on page 12.

9. When the program has ended, remove the key.
   See step 6 on page 14.
If the speed or incline settings are too high or too low, you can manually override the settings at any time by pressing the Speed or Incline buttons on the console. However, when the next “chirp” is heard, the speed and/or incline will change to the next settings of the CD or video program.

To stop the walking belt at any time, press the Stop button on the console. The Time/Watts display will begin to flash. To restart the program, press the Start button or the Speed + button. After a moment, the walking belt will begin to move at 1.0 mph. When the next “chirp” is heard, the speed and incline will change to the next settings of the CD or video program. When the CD or video program is completed, the walking belt will stop and the Time/Watts display will begin to flash. Note: To use another CD or video program, press the Stop button or remove the key and go to step 1 on page 19. Note: If the speed or incline of the treadmill does not change when a “chirp” is heard:

- Make sure that the iFIT.com indicator is lit and that the Time/Watts display is not flashing. If the Time/Watts display is flashing, press the Start button or the Speed + button on the console.
- Adjust the volume of your CD player or VCR. If the volume is too high or too low, the console may not detect the program signals.
- Make sure that the audio cable is properly connected, that it is fully plugged in, and that it is not wrapped around a power cord.
- If you are using your portable CD player and the CD skips, set the CD player on the floor or another flat surface instead of on the console.
- See the instructions near the bottom of page 26.

Follow your progress with the LED track and the displays.

Measure your heart rate, if desired.

When the program is completed, remove the key. Measure your heart rate, if desired.

Speed/Pace display—This display shows the speed of the walking belt and your current pace (pace is measured in minutes per mile). The display will change from one number to the other every few seconds, as shown by the indicators around the display.

Note: The console can display speed and distance in either miles or kilometres. To find which unit of measurement is selected, hold down the Stop button whilst inserting the key into the console. An E, for English miles, or an M, for metric kilometres, will appear in the Speed/Pace display. Press the Speed + button to change the unit of measurement. When the desired unit of measurement is selected, remove the key and then reinsert it. Note: For simplicity, all instructions in this manual refer to miles.

To reset the displays, press the Stop button, remove the key, and then reinsert the key. Measure your heart rate, if desired.

You can measure your heart rate using either the handgrip pulse sensor or the chest pulse sensor. Follow the instructions below to use the handgrip pulse sensor.

Stand on the foot pads and place your hands on the metal contacts on the handrail. Your palms must be resting on the upper contacts, and your fingers must be touching the lower contacts—avoid moving your hands. When your pulse is detected, the Heart Rate indicator will flash, three dashes (—–—) will appear in the Heart Rate/Calories display, and then your heart rate will be shown. For the most accurate heart rate reading, continue to hold the contacts for about 15 seconds.

When you are finished exercising, stop the walking belt and remove the key. Step onto the foot pads, press the Stop button, and adjust the incline of the treadmill to the lowest level. The incline must be at the lowest level when the treadmill is raised to the storage position or the treadmill will be damaged. Next, remove the key from the console and put it in a secure place. Note: If the displays and indicators on the console remain lit after the key is removed, the console is in the “demo” mode. See page 22 and turn off the demo mode.

When you are finished using the treadmill, move the on/off switch near the power cord to the off position and unplug the power cord.

HOW TO USE PRESET PROGRAMS

Insert the key fully into the console. See GETTING STARTED on page 11.

Select one of the three preset programs.

When the key is inserted, the manual mode will be selected. To select one of the preset programs, press the Program button repeatedly until the P1, P2, or P3 indicator lights.

Press the Start button or the Speed + button to start the program.

A moment after the button is pressed, the treadmill will automatically adjust to the first speed and incline settings for the program. Hold the handrails and begin walking.

CAUTION: Always remove iFIT.com CD’s and videocassettes from your CD player or VCR when you are finished using them.
Each program is divided into several time segments of different lengths. The Time/Watts display shows both the time remaining in the program and the time remaining in the current segment. One speed setting and one incline setting are programmed for each segment. The speed setting for the first segment will be shown in the flashing Current Segment column of the program display. (The incline settings are not shown in the program display.) The speed settings for the next five segments will be shown in the five columns to the right.

When only three seconds remain in the first segment of the program, both the Current Segment column and the column to the right will flash and you’ll hear a tone. In addition, if the speed and/or incline of the treadmill is about to change, the Speed/Pace display will also flash to alert you. During the CD or video program, an electronic “chirp” sound will alert you when the speed or incline of the treadmill is about to change. CAUTION: Always listen for the “chirp” and be prepared for speed and/or incline changes. In some instances, the speed and/or incline may change before the personal trainer describes the change.

HOW TO CONNECT YOUR VCR

Note: If your VCR has an unused AUDIO OUT jack, see instruction A below. If the AUDIO OUT jack is being used, see instruction B. If you have a TV with a built-in VCR, see instruction B. If your VCR is connected to your home stereo, see HOW TO CONNECT YOUR HOME STEREO on page 18.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adapter. Plug the adapter into the AUDIO OUT jack on your VCR.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adapter. Plug the adapter into the AUDIO OUT jack on your VCR.

Follow the steps below to use an iFIT.com CD or video program.

1. Insert the key fully into the console. See GETTING STARTED on page 11.

2. Select the iFIT.com mode. When the key is inserted, the manual mode will be selected and the M indicator will light. To use an iFIT.com CD or video program, press the iFIT.com button or press the Program button repeatedly until the indicator beside the iFIT.com button lights.

3. Insert the iFIT.com CD or videocassette. If you are using an iFIT.com CD, insert the CD into your CD player. If you are using an iFIT.com videocassette, insert the videocassette into your VCR.

4. Press the PLAY button on your CD player or VCR. A moment after the button is pressed, your personal trainer will begin guiding you through your workout. Simply follow your personal trainer’s instructions. Note: If the Time display is flashing, press the Start button or the Speed + button on the console. The treadmill will not respond to a CD or video program when the Time display is flashing.

During the CD or video program, an electronic “chirping” sound will alert you when the speed and/or incline of the treadmill is about to change. CAUTION: Always listen for the “chirp” and be prepared for speed and/or incline changes. In some instances, the speed and/or incline may change before the personal trainer describes the change.
HOW TO CONNECT YOUR HOME STEREO

Note: If your stereo has an unused LINE OUT jack, see instruction A below. If the LINE OUT jack is being used, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the audio cable into the adaptor. Plug the adaptor into the LINE OUT jack on your stereo.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the audio cable into the splitter. Plug the splitter into theUnused Side of the RCA Y-adaptor. Plug the RCA Y-adaptor into the LINE OUT jack on your stereo.

HOW TO CONNECT YOUR COMPUTER

Note: If your computer has a 3.5mm LINE OUT jack, see instruction A. If your computer has only a PHONES jack, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the PHONES jack on your computer.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the audio cable into the splitter. Plug the splitter into the PHONES jack on your computer. Plug your headphones or speakers into the other side of the splitter.

HOW TO CREATE CUSTOM PROGRAMS

Insert the key fully into the console. See GETTING STARTED on page 11.

Select one of the custom programs. See step 5 on page 12.

When the key is inserted, the manual mode will be selected. To select one of the custom programs, press the Program button repeatedly until the P4 or P5 indicator lights.

Note: If the custom program has not yet been defined, three columns of indicators will be lit in the program display. If more than three columns of indicators are lit, refer to HOW TO USE CUSTOM PROGRAMS on page 16.

Press the Start button or the Speed + button and program the desired speed and incline settings.

A moment after the button is pressed, the walking belt will begin to move. Hold the handrails and begin walking.

See the program display. Each custom program is divided into one-minute segments. One speed setting and one incline setting can be programmed for each segment. The speed setting for the first segment will be shown in the flashing Current Segment column of the program display. (The incline settings are not shown in the program display.) To program a speed setting and an incline setting for the first segment, simply adjust the speed and incline of the treadmill to the desired levels by pressing the Speed and Incline buttons. Every few times one of the Speed buttons is pressed, an additional indicator will light or darken in the Current Segment column.

When the first segment of the program is completed, the current speed setting and the current incline setting will be stored in memory. The three columns of indicators will then move one column to the left, and the speed setting for the second segment will be shown in the flashing Current Segment column. Program a speed setting and an incline setting for the second segment as described above. Note: After the third segment is completed, the columns of indicators in the program display will no longer move to the left. Instead, each time a segment is completed, the flashing Current Segment column will move one column to the right. If the Current Segment column reaches the right side of the program display, when the current segment is completed all columns of indicators in the program display will move three columns to the left.

Continue programming speed and incline settings for as many segments as desired; custom programs can have up to forty segments. When you are finished with your workout, press the Stop button twice. The speed and incline settings that you programmed and the number of segments that you programmed will then be saved in memory.

Follow your progress with the displays. See step 5 on page 12.

When the program has ended, remove the key. See step 6 on page 14.
HOW TO USE CUSTOM PROGRAMS

1. Insert the key fully into the console. See GETTING STARTED on page 11.

2. Select one of the custom programs. When the key is inserted, the manual mode will be selected. To select one of the custom programs, press the Program button repeatedly until the P4 or P5 indicator lights.

When a custom program is selected, the program display will show a simplified profile of the program. The Time/Watts display will show how long the program will last. Note: If only three columns of indicators are lit in the program display, refer to HOW TO CREATE A CUSTOM PROGRAM on page 15.

3. Press the Start button or the Speed + button to start the program. A moment after the button is pressed, the treadmill will automatically adjust to the first speed and incline settings for the program. Hold the handrails and begin walking.

Each program is divided into several one-minute segments. The Time/Watts display shows both the time remaining in the program and the time remaining in the current segment. One speed setting and one incline setting are programmed for each segment. The speed setting for the first segment will be shown in the flashing Current Segment column of the program display. The incline settings are not shown in the program display. The speed settings for the next five segments will be shown in the five columns to the right.

When only three segments remain in the first segment of the program, both the Current Segment column and the column to the right will flash and a tone will sound. In addition, if the speed and/or incline of the treadmill is about to change, the Speed/Pace display and/or the Distance/Incline display will flash to alert you, and three tones will sound. When the first segment is completed, all speed settings will move one column to the left. The speed setting for the second segment will then be shown in the flashing Current Segment column and the treadmill will automatically adjust to the speed and incline settings for the second segment.

The program will continue until the speed setting for the last segment is shown in the Current Segment column and there is no time remaining in the Time/Watts display. The walking belt will then slow to a stop. If desired, you can redefine the program while using the program. To change the speed or incline setting during the current segment, simply press the Speed or Incline buttons. When the current segment is completed, the new setting will be saved in memory. To increase the length of the program, first wait until the program is completed. Then, press the Start button and program speed and incline settings for as many additional segments as desired. (Note: Whilst you are adding segments to the program, the speed settings in the program display will not move to the left. Instead, each time a segment is completed, the flashing Current Segment column will move one column to the right. If the Current Segment column reaches the right side of the program display, when the current segment is completed all columns of indicators in the program display will move three columns to the left.) When you have added as many segments as desired, press the Stop button twice. To decrease the length of the program, press the Stop button twice at any time before the program is completed.

To stop the program temporarily, press the Stop button. All displays will pause and the Time/Watts display will begin to flash. To restart the program, press the Start button or the Speed + button. To end the program, press the Stop button, remove the key, and then reinsert the key.

4. Follow your progress with the displays. See step 5 on page 12.

5. Measure your heart rate, if desired. See step 6 on page 13.

6. When the program has ended, remove the key. See step 6 on page 14.

HOW TO CONNECT THE TREADMILL TO YOUR CD PLAYER, VCR, OR COMPUTER

To use iFIT.com CD’s, the treadmill must be connected to your portable CD player, portable stereo, home stereo, or computer with CD player. See pages 17 and 18 for connecting instructions. To use iFIT.com videocassettes, the treadmill must be connected to your VCR. See page 19 for connecting instructions. To use iFIT.com programs directly from your home computer, see HOW TO USE CUSTOM PROGRAMS on page 15.

HOW TO CONNECT YOUR PORTABLE CD PLAYER

Note: If your CD player has separate LINE OUT and PHONES jacks, see instruction A below. If your CD player has only one jack, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your CD player. Plug your headphones into the PHONES jack.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your stereo. Plug your headphones into the PHONES jack.

C. Insert the key fully into the console. See step 6 on page 12.

HOW TO CONNECT YOUR PORTABLE STEREO

Note: If your stereo has an RCA-type AUDIO OUT jack, see instruction A below. If your stereo has a 3.5mm LINE OUT jack, see instruction B. If your stereo has only a PHONES jack, see instruction C.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into an AUDIO OUT jack on your stereo.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your stereo.
To identify the parts shown on this exploded drawing, refer to the PART LIST on pages 30 and 31 of the User’s Manual.
